

VILASAM

Landing Page Development Change Brief

Prepared by	Head of Performance Marketing & Head of Sales — Vitu Realty
Prepared for	Development Team
Date	02 March 2026
Project	Vilasam — Munchoor, Surathkal, Mangalore
Pages in scope	Home Buyers: /vilasam/home-buyers Investors: /vilasam/investors
Priority	LAUNCH THIS WEEK — changes must be staged by urgency

EXECUTIVE SUMMARY

This document translates all performance marketing and CRO audit findings into discrete, prioritised development tasks. Each task is classified as Critical (must be complete before first ad spend), High (complete within 48 hrs of launch), or Medium (complete within Week 1). Tasks are ordered by dependency — tracking infrastructure must be resolved before any conversion-optimisation changes are validated.

MASTER TASK TABLE — ALL REQUIRED CHANGES

Tasks are grouped by priority tier. Complete all CRITICAL tasks before any ad spend is authorised. HIGH tasks must be completed within 48 hours of launch. MEDIUM tasks are in-flight optimisations.

PRIORITY	TASK & DESCRIPTION	OWNER	EFFORT
CRITICAL	GTM Installation & Verification Install Google Tag Manager container on all Vilasam pages. Verify via Tag Assistant.	Dev	1–2 hrs
CRITICAL	Google Ads Conversion Tags (x2) Create two GTM tags: site_visit_request (primary) and brochure_download (secondary). Trigger on thank-you URL.	Dev + Mktg	1 hr
CRITICAL	Thank-You URL Parameter Differentiation Append ?type=site_visit or ?type=brochure to the redirect URL on each form submit so GTM can distinguish conversions.	Dev	30 min
CRITICAL	Meta Pixel — Lead Event on Thank-You Page Confirm Meta Pixel fires a Lead event on thank-you page load. Verify in Events Manager Test Events tool.	Dev + Mktg	1 hr
CRITICAL	Meta CAPI Server-Side Implementation Implement facebook-nodejs-business-sdk on backend. Fire Lead event after successful DB write with hashed phone/email.	Dev	4–6 hrs
CRITICAL	Event Deduplication (eventId) Generate a unique eventId per submission. Pass to client-side fbq() call AND backend CAPI call. Prevents double-counting.	Dev	1 hr
CRITICAL	Real-Time Lead Alert (WhatsApp/SMS) On every DB write, trigger an instant WhatsApp or SMS notification to the sales team with lead name, phone, and audience segment.	Dev	2–3 hrs
HIGH	audience Parameter in DataLayer Push page_audience (home_buyers or investors) and lead_type (site_visit or brochure) to dataLayer on form submit.	Dev	30 min
HIGH	Remove "Preferred Plot Orientation" Field Remove from both forms on both pages. Sales team collects this on first call. Field causes decision fatigue and reduces submissions.	Dev	20 min
HIGH	Fix "Interested In" Dropdown Order — Home Buyers On /home-buyers page, reorder dropdown: 1) Building Your Dream Home 2) Investment 3) Just Exploring.	Dev	10 min

HIGH	Investor Hero Headline Update Replace current hero H1 "Vilasam" with return-led headline. Copy to be provided by Marketing before implementation.	Dev + Mktg	30 min
HIGH	Add Scarcity Trigger Above Form Add a line above both forms: "Only 24 plots. [X] already reserved." Actual reserved count to be provided by Sales.	Dev + Sales	20 min
MEDIUM	Separate Thank-You Pages by Audience Create /thank-you/home-buyers and /thank-you/investors for cleaner segment-level conversion reporting in Google Ads.	Dev	1 hr
MEDIUM	WhatsApp Sticky CTA Button Add a fixed "Chat on WhatsApp" button (bottom-right, mobile-prominent) as a parallel conversion path for users who avoid forms.	Dev	1–2 hrs
MEDIUM	Social Proof Module Add a testimonials or "X families already secured their plot" section above the bottom form. Copy from Sales team.	Dev + Sales	2 hrs
MEDIUM	Google Ads: Set Brochure as Secondary Conversion In Google Ads > Conversions, set brochure_download to "Don't use for bidding." Prevents Smart Bidding from optimising toward soft intent.	Mktg	15 min

TRACKING ARCHITECTURE — DETAILED SPECIFICATIONS

2.1 Thank-You URL Parameter Fix

Both forms currently redirect to the same /thank-you URL. GTM and Google Ads cannot distinguish a site visit lead from a brochure download. The fix is a single URL parameter appended at form submission. Estimated dev time: 30 minutes.

```
// In your form submit handler (Next.js / React)
const formType = isbrochure ? "brochure" : "site_visit";
const audience = isinvestors ? "investors" : "home_buyers";

// Redirect with parameters
router.push(`/vilasam/thank-you?type=${formType}&audience;=${audience}`);

// GTM Trigger Configuration:
// Trigger 1: Page URL contains /thank-you AND query param "type" = "site_visit"
// Trigger 2: Page URL contains /thank-you AND query param "type" = "brochure"
```

2.2 DataLayer Push on Form Submission

Before the redirect fires, push enriched event data to the GTM dataLayer. This enables audience-segmented reporting in Google Ads and passes structured data to Meta Pixel.

```
// Push to dataLayer BEFORE router.push()
window.dataLayer = window.dataLayer || [];
window.dataLayer.push({
  event: "vilasam_form_submit",
  lead_type: formType, // "site_visit" | "brochure"
  page_audience: audience, // "home_buyers" | "investors"
  project: "vilasam",
  event_id: eventId, // unique ID for Meta deduplication (see 2.3)
});
```

2.3 Meta Pixel + CAPI with Event Deduplication

Meta Pixel alone misses 20-35% of conversions on iOS devices due to ATT restrictions. CAPI sends conversion events server-side, bypassing browser limitations. Both must fire with a matching eventId to prevent double-counting.

```
// ■■■ FRONTEND (fire before redirect) ■■■■
const eventId = `vilasam_lead_${Date.now()}_${Math.random().toString(36).substr(2,9)}`;

fbq("track", "Lead", {
  content_name: `vilasam_${formType}`,
  content_category: audience,
  lead_type: formType,
}, { eventID: eventId });

// Pass eventId to your backend API route with the form data
// e.g. body: { ...formData, eventId, audience, formType }
```

```
// ■■■ BACKEND (fire after successful DB write) ■■■■■■■■■■■■■■■■■■■■  
// npm install facebook-nodejs-business-sdk  
import { FacebookAdsApi, ServerSideApi, EventRequest,  
UserData, Event } from "facebook-nodejs-business-sdk";  
  
FacebookAdsApi.init(process.env.META_ACCESS_TOKEN);  
  
async function sendCAPIEvent({ phone, email, sourceUrl, eventId, audience }) {  
    const userData = new UserData()  
        .setPhone(phone) // SDK auto-hashes with SHA-256  
        .setEmail(email); // SDK auto-hashes with SHA-256  
  
    const event = new Event()  
        .setEventName("Lead")  
        .setEventTime(Math.floor(Date.now() / 1000))  
        .setUserData(userData)  
        .setEventSourceUrl(sourceUrl)  
        .setActionSource("website")  
        .setId(eventId); // MUST match client-side eventId  
  
    const request = new EventRequest(  
        process.env.META_PIXEL_ID,  
        process.env.META_ACCESS_TOKEN  
    ).setEvents([event]);  
  
    await request.execute();  
}
```

Required Environment Variables

Variable	Description	Where to find
META_ACCESS_TOKEN	System User Access Token with ads_management permission	Meta Business Suite > System Users
META_PIXEL_ID	Your Meta Pixel numeric ID	Events Manager > Your Pixel
GTM_CONTAINER_ID	GTM-XXXXXXX format container ID	Google Tag Manager > Admin

LEAD ALERT SYSTEM — SALES RESPONSE SLA

In Indian real estate, the first-call advantage window is under 10 minutes. Every minute of delay in contacting a new lead increases the probability of losing them to a competitor. An automated instant alert to the sales team is not optional — it is a revenue protection mechanism.

3.1 Recommended Alert Trigger (Backend)

```
// Fire immediately after DB write succeeds — before CAPI call
async function alertSalesTeam(lead) {
  const message = [
    `NEW VILASAM LEAD`,
    `Name : ${lead.name}`,
    `Phone : ${lead.phone}`,
    `Interest: ${lead.interestedIn}`,
    `Audience: ${lead.audience}`,
    `Type : ${lead.formType}`,
    `Time : ${new Date().toLocaleString("en-IN")}`,
  ].join("\n");

  // Option A: WhatsApp via Twilio / Interakt / Wati
  await whatsappClient.sendMessage(SALES_WHATSAPP_NUMBER, message);

  // Option B: SMS via MSG91 / Twilio
  await smsClient.send({ to: SALES_PHONE, body: message });
}
```

3.2 Recommended SLA Targets

Lead Type	First Contact Target	Channel	Fallback
Site Visit Request	Under 5 minutes	Phone call	WhatsApp within 10 min
Brochure Download	Within 2 hours	WhatsApp	Phone call same day

CRO CHANGES — FORM & PAGE COPY

The following changes require minor frontend edits only — no backend changes. Estimated total effort: under 2 hours. Impact on conversion rate is estimated at 15–25% improvement based on industry benchmarks for form friction reduction.

CRITICAL Remove "Preferred Plot Orientation" Field — BOTH PAGES

- Field is present on: /vilasam/home-buyers and /vilasam/investors
- Asking a cold-traffic visitor to decide plot orientation before speaking to sales creates decision fatigue.
- Remove the entire field and its label from both forms.
- Sales team will collect this preference on the first discovery call.

HIGH Fix "Interested In" Dropdown — HOME BUYERS PAGE ONLY

- Current order: Investment > Building Your Dream Home > Just Exploring
- Required order: Building Your Dream Home > Investment > Just Exploring
- Cognitive mismatch: visitors from a home-buyer ad arrive and see "Investment" first.
- The default/first option must match the audience the page is targeting.

HIGH Add Scarcity Line Above Hero Form — BOTH PAGES

- Insert a single line of text above the form submit button.
- Suggested copy: "Only 24 plots available. [X] already reserved — act fast."
- Replace [X] with actual reserved count. Update weekly. Sales team to provide number.
- Style: small caps, gold or amber colour, not larger than 10px. Must not dominate form.

HIGH Investor Hero H1 — INVESTORS PAGE ONLY

- Current H1: "Vilasam" — no investment proposition, no hook.
- Marketing to provide final approved copy before this is implemented.
- Placeholder direction: lead with the 2X growth or infrastructure thesis.
- Example: "Mangalore's fastest-growing corridor. 2X in 3 years. 24 plots left."
- The price (Rs.33.5L) should remain as the sub-heading — do not remove it.

PRE-LAUNCH VERIFICATION CHECKLIST

Every item below must be checked and signed off before the first ad campaign goes live. Marketing to verify items marked MKT. Dev to verify items marked DEV.

OWNER	CHECKLIST ITEM	DONE
DEV	GTM container fires on both landing pages — verified in Tag Assistant	☐
DEV	Thank-you URL appends ?type= parameter correctly for both form types	☐
MKT	Google Ads: site_visit_request conversion tag fires — status shows "Recording"	☐
MKT	Google Ads: brochure_download conversion tag fires — set to "Don't use for bidding"	☐
DEV	Meta Pixel Lead event fires on thank-you page — verified in Events Manager Test Events	☐
DEV	CAPI Lead event appears in Events Manager with matching eventId (deduplication confirmed)	☐
DEV	eventId generated per submission and passed to both fbq() and CAPI call	☐
DEV	page_audience and lead_type parameters present in dataLayer push	☐
DEV	Sales team receives real-time WhatsApp/SMS alert within 60 seconds of test submission	☐
DEV	"Preferred Plot Orientation" field removed from both pages, both forms	☐
DEV	"Interested In" dropdown order corrected on /home-buyers page	☐
DEV	Scarcity line added above form on both pages (copy confirmed with Sales)	☐
MKT	Investor hero H1 updated with approved return-led copy	☐
MKT	Google Search campaigns have negative keywords list applied	☐
MKT	Meta campaign split: Home Buyers and Investors in separate ad sets	☐
MKT	Daily budget caps set: max Rs.3,000/day per audience for Week 1	☐
